

## Personal Devlog 1 - Prototype

### September 7, 2025

- I made the first push and HTMLs
- I created the CSS files and linked them together to their respective HTML
- Shared some designs I made by hand on how the website could look like
- Helped on figuring out how to work everyone at the same time
- Fixed some minor issues

**Commentary:** I learned a LOT on how to work with repos and with these types of projects as a team. Also learned on how to properly work with CSS and HTML as a whole

### September 8, 2025

- Helped out with some designs
- Helped out with bug fixing
- Stylized the webpage a bit
- Learned some CSS animation tools stuff

**Commentary:** CSS is kinda challenging in a fun way.

### September 9, 2025

- Tried to implement Bootstrap and Utterly failed

**Commentary:** As well as my team, I refused to copy and paste whatever AI's were suggesting us to do on the project to implement bootstrap. We never managed to implement boot without destroying the website, so we decided to send it without boot. We'll add bootstrap later down the line.
